

## Professional Services

OPNET **nCompass™**  
for Enterprises

OPNET **nCompass™**  
for Service Providers

OPNET nCompass™ provide graphical visualization of heterogeneous networks, including assets and their current status. nCompass automates and simplifies network management by collecting and unifying real-time operational data from a wide range of commercially available network devices and element management systems. nCompass provides intuitive graphical views for improved network situational awareness and security, as well as rapid network analysis and troubleshooting.

OPNET offers a suite of professional services specifically designed for nCompass solutions. These services include solution customization for unique customer requirements, system integration and implementation, on-site staff augmentation for operational support, and remote or on-site administration.

### nCompass Solution Customization

OPNET offers professional services to customize nCompass solutions for unique operational environments. These services include:

- Customization of VNE Server data collection adapters for new network devices and management systems
- Customization of the nCompass console interface for specialized graphical views and troubleshooting workflows

### nCompass System Integration and Implementation

OPNET provides configuration, implementation, data validation, and knowledge transfer services to integrate nCompass into unique operational environments. This service includes the implementation and configuration of all nCompass solution components such as VNE Server, nCompass Console, and nCompass Web server.

### Full Time On-Site Staff Augmentation

Given the dynamic nature of IT operations and evolving business demands, organizations may wish to outsource some of their network and application performance management functions. In response, OPNET offers full time, on-site staff augmentation services to perform daily IT performance analysis, planning, troubleshooting, and management.

### Remote/On-Site Administration

Periodic and ongoing maintenance and monitoring is recommended for nCompass solutions to ensure database integrity and accuracy. OPNET offers a service that provides the required maintenance and administration of nCompass's underlying VNE Server by experienced OPNET engineers. This service is performed either remotely on a weekly basis, or on-site at the customer's premise on a monthly basis.
